

Jacob Buschmann

Platform & DevOps Engineer

Phone: 760-718-9504

Email: buschmann.jake@gmail.com

Resume: buschmjm.github.io/resume/

Projects: willowriverautomation.com

Professional Summary

Platform and DevOps engineer with six years on internal platforms, CI/CD, and hybrid infrastructure. At Patron Points I own mobile delivery for hundreds of white-label apps (Kubernetes, Flask control plane with 20+ documented endpoints) and day-to-day ops across Proxmox, VMware, and Azure, GCP, and Firebase. MoveAnchor and Intake Relay also run in production on GCP under [Willow River Automation](https://willowriverautomation.com).

Outside work, I am a husband and dad. I keep a homelab in a server cabinet with K3s, a Postgres box, game servers, and whatever I am debugging this week.

Experience

Technical Operations & Infrastructure Lead

Patron Points Inc, Woodbury, MN | October 2025 to Present

Mobile CI/CD platform, hybrid infra, and internal tools for a multi-tenant app fleet.

- Finished company-wide mobile CI/CD for hundreds of templated apps. Learned Ansible and Semaphore on the job while wiring Firebase, PostgreSQL registries, and Azure DevOps (ADO) builds with auto-renewed credentials.
- Rebuilt delivery as a Flask API on Kubernetes (20+ documented endpoints), moved artifacts to MinIO, and ran Android builds on-cluster so Mac minis only compile iOS.
- Redeployed Grafana with monitoring and alerts so ops could see on-prem hosts and cloud services in one place instead of chasing logs ad hoc.
- Built a Python/Tkinter batch tool with LDAP-gated APIs on Kubernetes to render tens of thousands of marketing images from spreadsheets. Turned a month-long team effort into a same-day self-service run.
- Deployed PiSignage on Raspberry Pi fleets with scheduled power, marketing playlists, and Grafana dashboards for the ops team.
- Worked on a team managing Proxmox, VMware, Linux, and Kubernetes on-prem plus Azure, GCP, and Firebase for the mobile platform, signage, and internal tools.

Technical Operations & Implementation Lead

Matt's Moving, Saint Paul, MN | July 2022 to October 2025

- Ran IT for 20 office staff and 100+ field workers across sales, dispatch, HR, accounting, and fleet.
- Managed Active Directory, Office 365, Windows/Linux, and Google Cloud with on-call incident response.
- Built internal apps (AppSheet, FlutterFlow, Firebase) and connected Stripe, QuickBooks, Supermove, and Google Maps so CRM, billing, and scheduling shared one stack.
- Automated workflows in Zapier, Google Apps Script, and Power Automate, saving 100+ hours per month on manual data entry.

Sales Director & Systems Strategist

Matt's Moving, Saint Paul, MN | July 2019 to July 2022

- Project-managed a company-wide CRM migration with scoped requirements, developer coordination, training, and a zero-downtime rollout.
- Tested new CRM features with developers using feedback from the sales floor.

Administrative Specialist (Petty Officer 3rd Class, E4)

United States Navy | 2012 to 2016

- Managed classified personnel records and admin operations in secure, high-tempo environments.
- Kept reporting accurate for leadership and supported mission-critical logistics under deadline pressure.

Skills

- **Platform & CI/CD:** Kubernetes, Azure DevOps (ADO), CI/CD (web, mobile, Cloud Build)
- **IaC & automation:** Terraform (GCP), Ansible, Semaphore, Windmill, GitHub Actions, MinIO, OpenBao
- **Cloud:** GCP (Cloud Run, Cloud SQL, Terraform, Cloud Build, GCS), Netlify, Azure, Firebase, AWS
- **Data, APIs & observability:** PostgreSQL, Stripe, OpenAPI, PostHog, SendGrid, Grafana
- **Infrastructure:** Linux, Proxmox, VMware, LDAP, Active Directory, Office 365 administration, Google Workspace
- **Development:** Python, Flask, Vue, Docker, Tkinter, JavaScript, Node.js, Git, PowerShell; AppSheet, Zapier, FlutterFlow
- **AI tooling:** Cursor, GitHub Copilot, Open WebUI, Ollama, LLM APIs

Contract Work & Projects

Products and work samples at willowriverautomation.com.

- MoveAnchor is a multi-tenant CRM for moving companies (pipeline, dispatch, warehouse, invoicing) in private alpha. I run the API and UI on Cloud Run, Postgres on Cloud SQL, and deploy with Terraform and Cloud Build, with Cloud Tasks and Scheduler for background jobs.
- Intake Relay is a headless intake API for SaaS onboarding: versioned flows, embed SDK, and webhooks with retries and HMAC signing. It runs on GCP (Cloud Run, Cloud SQL, GCS, Stripe, Terraform, Cloud Build). The marketing site reaches it through a Netlify /relay proxy.
- I run willowriverautomation.com on Vue 3 and Netlify: product pages, PostHog, Intake Relay signup, and a contact form into Intake Relay, SendGrid, and Slack.
- On contract work I use Cursor, Copilot, and Open WebUI (local Ollama plus API models) for specs and doc search. I still review anything that ships to users.

Education

Technical Diploma, IT, Software Development Specialist
Chippewa Valley Technical College, Eau Claire, WI

Coursework: Systems Analysis, Software Design, JavaScript, Python, Database Design, Web Development, Cloud Fundamentals
